EDUCATION

M.S. Computer Science, *Rice University*
Houston, TX

Aug 2025 – May 2027 (expected)

B.S. Computer Science, *Rice University*
Houston, TX

Aug 2021 – May 2025

EXPERIENCE

Machine Learning Engineer Intern, *NBer*
San Francisco, CA

Jun 2026 – Aug 2026

- Built a dynamic membership-benefits prototype end to end — feature pipeline, ranking model, and the service that applies a benefit at order time — piloted to ~60,000 members across two metros.
- Implemented that service in Python behind gRPC and Protocol Buffers, containerized and deployed to Kubernetes via Helm, with a Redis cache invalidated by a Kafka consumer made idempotent under at-least-once delivery.
- Load-tested with Locust before rollout, tracing a p99 breach at $3\times$ expected QPS to per-request Redis connections; the service fails open so a slow dependency never blocks checkout.
- Found 81% of members never answered the push, making the default decisive: a ~40-line change beat the ranking model on redemption, 3.1pp to 0.8pp. Flagged a 0.4pp opt-out rise as a cost outside the team's metrics.

PROJECTS

ClipPrompt — *open-source macOS utility*
Swift, SwiftUI, AppKit, URLSession

Aug 2026 – Sep 2026

- Released a macOS tool that routes clipboard contents through a saved prompt-and-model recipe against the Anthropic and OpenAI APIs, with a chat window for iterating on near misses.
- Implemented the menu-bar client in SwiftUI over AppKit with a Carbon-backed global hotkey and URLSession streaming, so answers arrive incrementally and each turn overwrites the clipboard.
- Refuses clipboard content marked concealed by password managers, caps payload size, and keeps API keys in the Keychain rather than the config file.
- Daily driver with ~12 outside users and 71 GitHub stars, built across three weekends largely with a coding agent; shipped a next-day fix for an externally reported size-cap bug.
