EDUCATION

M.S. Computer Science, *Rice University*
Houston, TX

Aug 2025 – May 2027 (expected)

B.S. Computer Science, *Rice University*
Houston, TX

Aug 2021 – May 2025

EXPERIENCE

Machine Learning Engineer Intern, *NBer*
San Francisco, CA

Jun 2026 – Aug 2026

- Built a dynamic membership-benefits prototype end to end — ranking, push notification, default fallback, and order-time surfacing — piloted to ~60,000 members across two metros.
- Built the feature pipeline in pandas on Airflow over Snowflake behind a LightGBM ranker; traced a 0.74 offline NDCG@3 that landed flat online to training-serving skew and realigned the cutoffs.
- Wrote the order-time eligibility service in Python over gRPC, with a Redis cache invalidated by an idempotent Kafka consumer; Locust testing caught a p99 blowout from per-request connections.
- Found 81% of members never answered the push: a ~40-line default-policy change lifted redemption 3.1pp against 0.8pp from the model. Flagged a 0.4pp rise in notification opt-outs.

PROJECTS

ClipPrompt — *macOS menu-bar utility*
Swift, SwiftUI, AppKit, URLSession

Aug 2026 – Sep 2026

- Built a macOS clipboard-to-LLM tool: a hotkey sends the clipboard to a saved prompt-and-model recipe and returns the result, with a chat window for iterating on near misses.
- Implemented the menu-bar app in SwiftUI over AppKit with a Carbon-backed global hotkey, streaming responses over URLSession so each turn overwrites the clipboard.
- Refuses clipboard content marked concealed by password managers, caps payload size, and keeps API keys in the Keychain.
- ~12 external users and 71 GitHub stars across three weekends, built largely with a coding agent; fixed an outside bug report the next day.
